

Anoop Kamlakar Hattekar

akhattekar@gmail.com | linkedin.com/in/anoop-hattekar | github.com/Anoop240305 | Pune, Maharashtra, India

SUMMARY

Full-stack software engineer with hands-on production experience building **REST APIs**, web applications, and backend pipelines using **Python** and **Django**. Strong foundation in **OOP principles, data structures and algorithms**, and debugging complex systems. Focused on **microservices** architecture and scalable backend design.

EXPERIENCE

TechB Softwares

February 2026 – June 2026

Software Engineer Intern — Full Stack

Pune, India

- Developed 10+ production-grade KPI dashboards in **React.js** with real-time **REST API** integration and data visualizations — reducing invoice review time by **30%**
- Audited and overhauled **Django** billing logic using **OOP** design patterns; corrected energy computation formulas — improving invoicing accuracy by **25%** across multi-variable rate structures
- Integrated third-party **REST APIs** for automated solar energy data ingestion; orchestrated scheduled jobs via **APScheduler**, cron, and Django BaseCommand — saving **3+ hrs/week** of manual operations and enabling reliable nightly data sync across all connected solar installations
- Built end-to-end **Playwright** automation scripts for repetitive QA workflows and validated API contracts using **Postman** — demonstrating strong analytical and collaboration skills across the team

PROJECTS

SolarOps Invoicing Platform | React.js, Django, PostgreSQL, Tailwind CSS

2026

- Built and optimized core billing workflows handling invoice generation, tariff calculations, and automated reporting for solar energy operations.
- Resolved critical billing engine bugs; restructured query-layer **data structures** to eliminate N+1 patterns — achieving **25% faster** report generation
- Automated daily energy sync with scheduled background jobs configured via Django BaseCommand — ensuring zero-downtime processing and consistent data availability for reporting
- Built automated video meter-reading extraction using **Google Cloud Vision API** (OCR), eliminating manual data entry and accelerating invoice generation turnaround

Inventory Management System | Node.js, Express.js, MySQL, REST API, React.js

2025

- Designed **REST APIs** with Node.js/Express applying **OOP** principles; implemented full **CRUD** operations across 5+ product categories backed by **MySQL** with optimized **data structures**
- Improved **SQL query performance by 35%** through indexing and join strategies; reduced data-entry errors by **20%** via structured UI form validation

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C, C++

Concepts: OOP, Data Structures & Algorithms, REST APIs, Microservices

Web Frameworks: Django, Django REST Framework, Node.js, Express.js

Frontend: React.js, Tailwind CSS, HTML5, CSS3

Databases: PostgreSQL, MySQL

Tools: Git, GitHub

ACHIEVEMENTS

- **Off-Campus Hackathon Winner (2025):** Won TechB Softwares' competitive hackathon among external participants; awarded a **paid internship** for outstanding technical performance
- **Project Competition Winner (2024):** Ranked 1st at institutional level; selected for **SPPU State-level Competition** among 100+ teams
- **Event Management Lead — Utkarsh 2k26:** Led end-to-end event operations for a state-level project competition with **200+ participating groups** from across India

EDUCATION

PCET's Pimpri Chinchwad College of Engineering and Research

Bachelor of Engineering — Electronics and Telecommunication

Expected June 2027

CGPA: 9.1 / 10.0

JK Junior College of Science

Higher Secondary Certificate (HSC)

February 2023

76.67%
